

Dual Operational Amplifiers

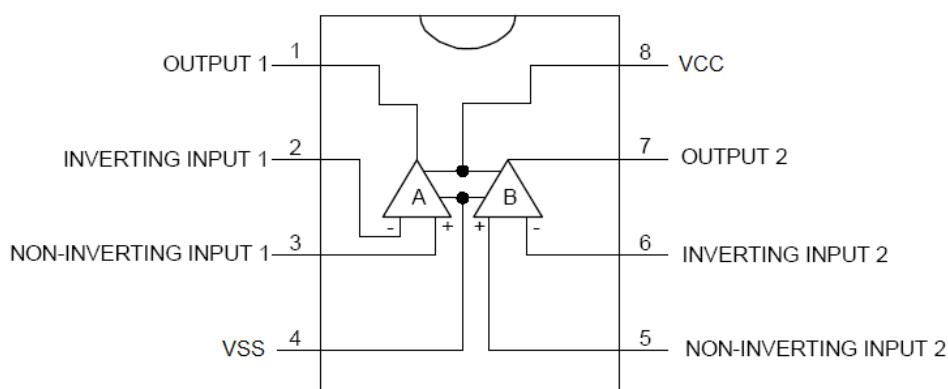

❖ GENERAL DESCRIPTION

These devices consist of two independent, high gain, internally frequency-compensated operational amplifiers designed to operate from a single supply over a wide range of voltages. Operation from split supplies also is possible if the difference between the two supplies is 3V to 40V, and V_{CC} is at least 1.5V more positive than the input common-mode voltage, the low supply-current drain is independent of the magnitude of the power supply voltage.

❖ FEATURES

- Two internally compensated OP amps
- Wide power supply range: 3V to 40V
- Large output voltage swing: 0V to V_{CC}-1.5V
- Low input bias current
- Low input offset voltage and offset current
- Internally frequency compensated for unity gain
